

ChronosHub

Simplifying research publishing together

Streamline Your Open Access Management Today

ChronosHub is a leading platform for streamlining the publishing workflow with a focus on unburdening the researchers. Through a collaborative approach, ChronosHub ensures a complete service for all aspects of Open Access, including effective management of publishing fees, all types of OA agreements, funder policy compliance, data integrations, and reporting for publishers, funders, and institutions. ChronosHub also supports authors in selecting suitable journals for their manuscript submissions by making funding policies and publisher agreements transparent.

Branded Journal Finder

The journal finder includes about 45,000 journals and enables authors to see for each journal if it is compliant with their funder's open access policy. Conditions based on the institution's publisher agreements are also presented per journal.

Compliance Management & Cost Minimization

ChronosHub collects article data upon acceptance from publishers & authors and makes automatic compliance checks to highlight issues with any funder policies or publisher agreements, e.g., to minimize costs.

APC Processing & Approval Dashboard

ChronosHub collects the invoices from publishers & authors and can do the payments for the institution. Administrators can use the approval dashboard to release invoices or count them towards RAP quotas.

Data & Reporting

Administrators have full access to all the institution's data and reports directly in ChronosHub and over its API.

Repository Deposits & Green OA Management

ChronosHub systematically collects the right full text version from publishers & authors and makes automatic deposits into Institutional Repositories.
